Private Documents Directory

Private Documents Directory

This directory contains private documents that are accessible only to members who belong to specific groups.

How It Works

1. **Add Documents**: Place markdown (.md) files in this directory or subdirectories
2. **Assign Groups**: Use the admin panel (`/admin/private_docs_sharing.php`) to assign groups to files
3. **Group Access**: Members who belong to assigned groups can view these documents

Directory Structure

```
private/
    ├── README.md                   # This file
    ├── document.md                 # Root level document
    └── folder/                     # Organized by category
        └── another-document.md
```

Access Control

- Files are only accessible to members who belong to groups assigned to that file
- Files with no groups assigned are inaccessible to everyone
- Group assignments are managed by administrators via the admin panel

Adding Documents

1. Create your markdown file (`.md` extension required)
2. Place it in this directory or a subdirectory
3. Log in as an administrator
4. Go to `/admin/private_docs_sharing.php`
5. Assign groups to the file

Viewing Documents

Members can view accessible documents at `/private_docs.php` or by visiting `/doc_viewer.php?file=path/to/file.md&private=1`
